EBCV

Since 2019, our team has been rehabilitating abandoned orchards and vineyards in different countries.

As of 2023, we have managed to reanimate 80 hectares of vineyards in Imeretia (Georgia), 20 hectares in Krasnodarsky Krai (Russia), 52 hectares in the Alatau Valley (Kazakhstan), which allowed us to acquire our own raw material base for winemaking. At the moment, at various stages of recovery, the company has more than 400 hectares of orchards and vineyards in several countries. and vineyards in several countries.

Since 2022, despite the circumstances, we started to develop wines and ciders from our own raw materials and in 2023 the company "EBCV - Easy Bella Cider Village" was founded, which united the producer of wines and ciders under their respective brands.

The products of the commercial cooperative EBCV are the fruit of agriculture and art.

Easy Bella!

Easy Bella Vineyards

All of our vineyards are planted with unrivalled French and Georgian grape varieties, and these are the varieties used as raw materials for the production of wines by the world's most revered wineries.

White varieties: Chardonnay, Muskat Ottonel, Viognier, Sauvignon Blanc, Muscat Petit, Rkatsiteli.

Red varieties: Cabernet Sauvignon, Cabernet Franc, Syrah, Pinot Noir, Merlot, Saperavi.

The unique combination of different climatic zones allows our winemakers to create blends of truly unique wines without deviating from established winemaking traditions.

Production

Today, given the original profile of the company, our production sites are at the and as a consequence, our production volumes are rather limited, but this is what allows our team to maintain high standards of winemaking, and compete with the best in the industry.

Limited volume does not mean that production is artisanal. In order to unlock the full potential of the crop, we use the most advanced and high-quality equipment at all stages, such manufacturers as Gangloff, TMCi Padovan, Bucher. At the stage of storage and maturation, where the main magic happens, our wines rest in oak barrels from RADOUX, DEMPTOS, MAGRENAN, acquiring their individual character, unique taste and aroma.

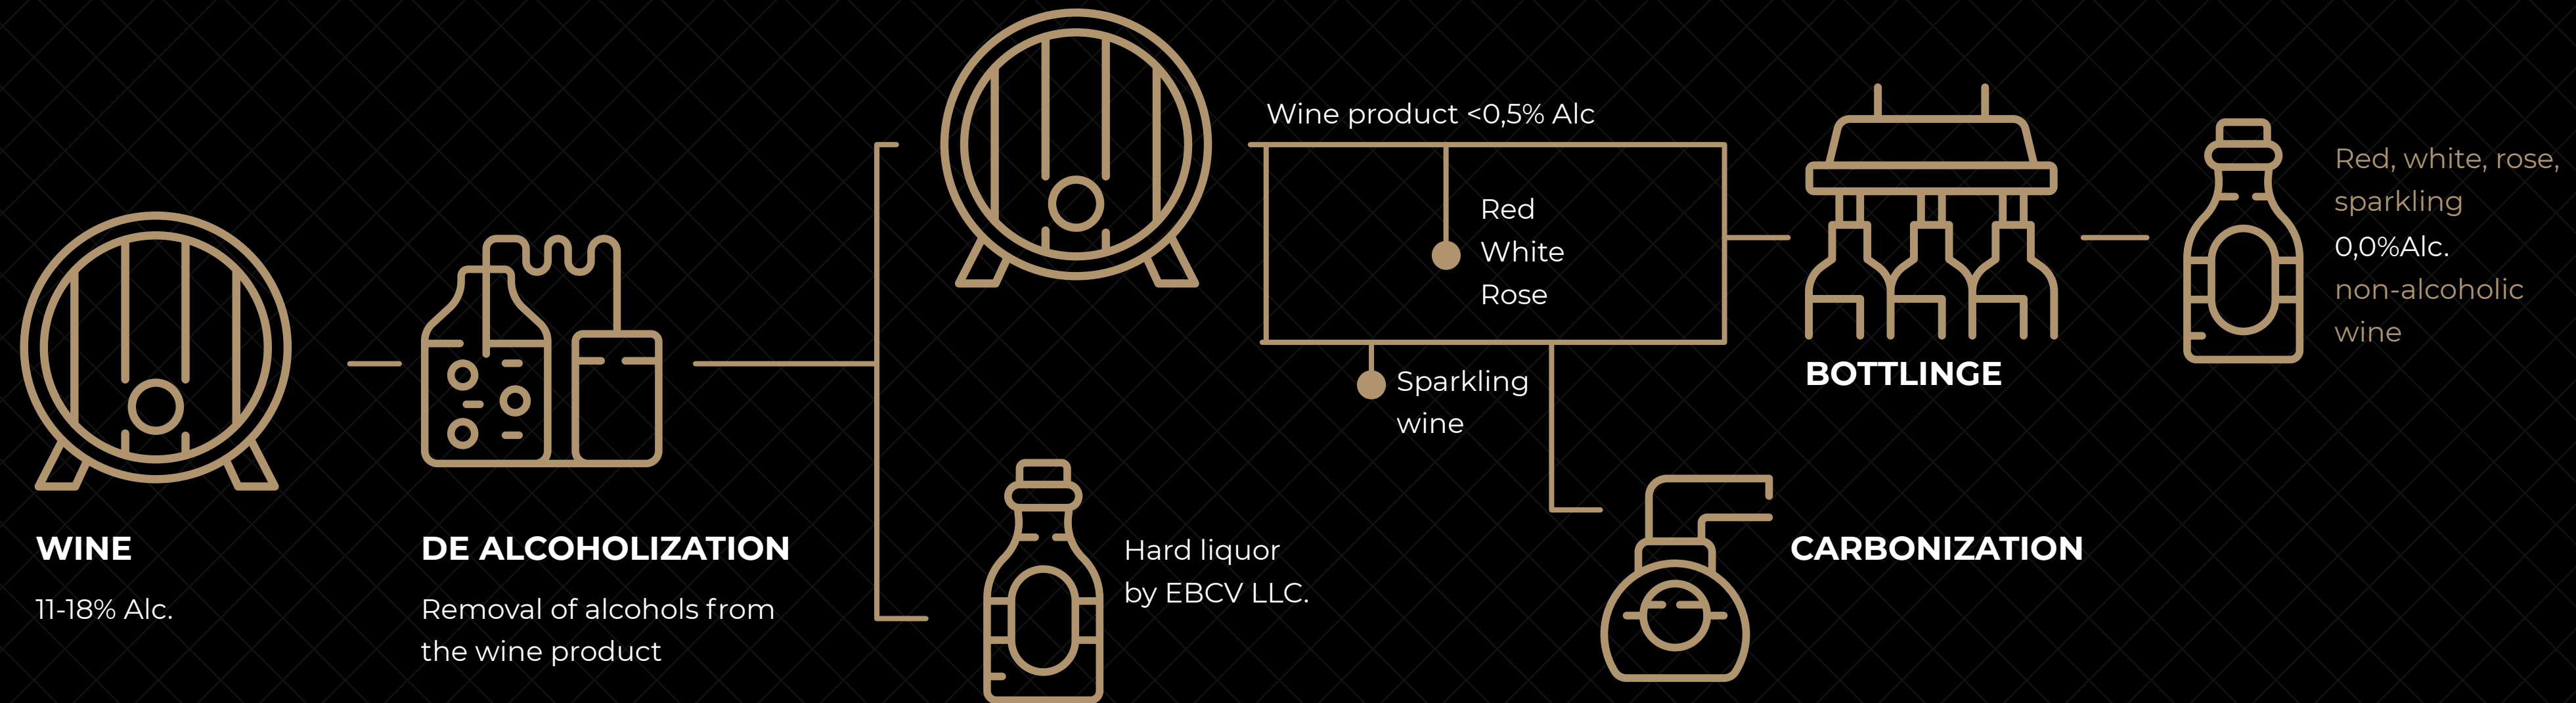

Our company is also equipped with a tank farm for aging sparkling wines.

We pay special attention to the process of wine oxidation in order to prevent negative consequences of this inevitable stage and to preserve the freshness of the wine for a long time, thus ensuring the perfect quality of each bottle of our product.

As for bottling, the available equipment allows us to fill each bottle with minimal loss of quality, thus bringing the fruits of our labor to the connoisseurs at the peak of its taste and aromatic qualities. Nitrogen treatment of containers before filling protects the product from various risk factors, ensures the preservation of wine quality, and extends its shelf life.

NON-ALCOHOLIC WINE

What really sets us apart from other wineries is that despite the high level of our wine material, we make non alcoholic wines from it on par with classic wines.

Non alcoholic wine is a wine that has undergone the full production cycle of a classic natural wine, de alcoholized at the last stage before bottling. We de alcoholize our wine in the gentlest and most expensive way to preserve not only its flavor and aromatic properties, but also all the fermentation products useful for the body.

The wine is stripped of its alcohol content just before bottling, by vacuum de alcoholization, at a temperature of only 22°C, which does not damage the wine in any way and does not deprive it of its beneficial properties.

Non alcoholic wine comes in all the same types as classic wine: white, red, rose, dry, semi dry, sweet and sparkling.
